Florida Exotic Pest Plant Council's 2011 List of Invasive Plant Species

Purpose of the List: *To focus attention on —*

- the adverse effects exotic pest plants have on Florida's biodiversity and native plant communities,
- the habitat losses in natural areas from exotic pest plant infestations,
- ▶ the impacts on endangered species via habitat loss and alteration,
- ▶ the need for pest-plant management,
- the socio-economic impacts of these plants (e.g., increased wildfires or flooding in certain areas),
- changes in the severity of different pest plant infestations over time,
- providing information to help managers set priorities for research and control programs.

CATEGORY I

Invasive exotics that are altering native plant communities by displacing native species, changing community structures or ecological functions, or hybridizing with natives. This definition does not rely on the economic severity or geographic range of the problem, but on the documented ecological damage caused.

,	Scientific Name	Common Name	FLEPPC Cat.	Gov. List	Reg. Dist.
Albizia julibrissin mimosa, silk tree I N, C Albizia Lebbeck woman's tongue I C, S Ardisia centata (A crenulata misapplied) coral ardisia I N, C, S Ardisia elliptica (A, humilis misapplied) shoebutton ardisia I N C, S Asparagus aethiopicus (A, sprengeri; A. densificus misapplied) asparagus-fern I C, S Blachinia variegata orchid tree I C, S Blachinia variegata orchid tree I C, S Blachofia javanica bishopwood I P, N C, S Colophyllum antillarum Cicc calaba and C. inophyllum misapplied) santa maria, mast wood, Alexandrian laurel I P, N C, S Casuarina equisctifolia Australian-pine, beach sheoak I P, N C, S Casuarina equisctifolia Australian-pine, gray sheoak I P, N C, S Cinnamomum camphora camphor tree I N, C, S Colubrina asiatica lather leaf I N C, S Colubrina asiatica	Abrus precatorius	rosary pea	I	N	C, S

¹Does not include Ficus microcarpa subsp. fuyuensis, which is sold as "Green Island Ficus"

FLEPPC List Definitions:

Exotic – a species introduced to Florida, purposefully or accidentally, from a natural range outside of Florida.

Native – a species whose natural range includes Florida.

Naturalized exotic – an exotic that sustains itself outside cultivation (it is still exotic; it has not "become" native).

Invasive exotic – an exotic that not only has naturalized, but is expanding on its own in Florida native plant communities.

Abbreviations:

Government List (Gov. List): P = Prohibited aquatic plant by the Florida Department of Agriculture and Consumer Services;

N = Noxious weed listed by Florida Department of Agriculture & Consumer Services;

U = Noxious weed listed byU.S. Department of Agriculture.

Regional Distribution (Reg. Dist.): N = north, C = central, S = south, referring to each species' current distribution in general regions of Florida (not its potential range in the state). Please refer to the map below.

Changes to the 2011 List:

New Listings to Category I:

Deparia petersenii

(Japanese false spleenwort)
Documented in numerous near
exotic-free ravines in the central
panhandle, it is displacing native flora
and likely insect populations because
it forms extremely dense colonies.
Documented in seven Florida counties.

Lumnitzera racemosa

(black mangrove)
This Asian mangrove has spread abundantly following plantings at Fairchild Tropical Botanical Garden in Miami-Dade County between 1966 and 1971. The species subsequently spread into mangrove forests at Fairchild and the adjacent Matheson Hammock Park, infesting 19 acres with stem densities exceeding that of native mangrove species. Looks very similar to the protected native white mangrove (Laguncularia racemosa).

Phymatosorus scolopendria

(serpent fern, wart fern)
This fern, native to tropical Asia,
Africa, and Polynesia, has been
documented naturalizing in three
south Florida counties. It is invading
rockland hammocks and forested
wetlands where it displaces native
understory species including
endangered ferns.

New Listings to Category II:

Ardisia japonica (Japanese ardisia) Ardisia japonica is a plant species from Japan. Thirteen populations have been located in San Felasco Hammock in Alachua County, two more at the Loblolly Nature Center in Gainesville, and another one containing 3,000 to 4,000 plants in Florida Caverns State Park in the Florida panhandle. All of the infestations are in undisturbed mature upland hardwood forest with healthy, diverse ground cover that is displaced as it spreads by underground rhizomes. Fruits collected from these populations produced viable seedlings.

²Many names are applied to this species in Florida because of a complicated taxonomic and nomenclatural history. Plants cultivated in Florida, all representing the same invasive species, have in the past been referred to as *Ruellia brittoniana*, *R. tweediana*, *R. caerulea*, and *R. simplex*.

Bruguiera gymnorrhiza

(large-leaved mangrove)
This mangrove from the Old World
tropics is established at the Kampong, a
botanical garden in Miami-Dade County
where it was planted in 1940. The
leaves and propagules of this species
bear a strong resemblance to the native
red mangrove (*Rhizophora mangle*). In
a 2008 survey it was found naturalized
in mangrove forest on the property,
where 86 individuals were observed and
recruitment rates were higher than for
native species. There is a strong chance
that it will disperse to other nearby
mangrove forests.

Cocos nucifera (coconut palm) Coconut palm, ubiquitous along Florida's coastlines, is thought to be native to the Malay Peninsula or the South Pacific. This species has been found invading beach dune and coastal grassland communities in extreme south Florida and the Florida Keys. Plants form thick clusters and shed leaves that form dense layers on the ground, displacing native species. Impacted species include the federally threatened Garber's spurge (Chamaesyce garberi) in the Cape Sable area of Everglades National Park and nickerbean (Caesalpinia bonduc), the host plant for the endangered Miami Blue butterfly at Bahia Honda State Park.

Mikania micrantha (mile-a-minute vine)

This vine of the American tropics is listed on the Federal Noxious Weed List because of invasiveness in other tropical regions. *M. micrantha* was first observed in Florida in 2008 in Miami-Dade County. It has since been observed at over two dozen sites throughout the Redland area of Miami-Dade County. It is primarily associated with agricultural sites, particularly container nurseries and tree farms, but has been found within the interiors of two rockland hammock fragments. It is a threat to

other natural areas in Miami-Dade County, and poses a very high risk of dispersing to other counties.

Syzygium jambos

(Malabar plum, rose apple)
This species was downgraded from the
Category II list in 2009 because of a
lack of data in EDDMapS, herbaria, and
observations of committee members.
However, data compiled by FNAI shows
62 records in 9 counties in mesic and
wet flatwoods, basin and floodplain
wetlands. It has been reinstated as a
Category II.

Category Changes

Jasminum sambac and Solanum jamaicense removed from Category II based on lack of data in natural areas. Urena lobata moved from Category II to Category I.

Use of the FLEPPC List

The FLEPPC List of Invasive Plant Species is not a regulatory list. Only those plants listed as Federal Noxious Weeds. Florida Noxious Weeds or in local ordinances are regulated by law. FLEPPC encourages use of the Invasive Species List for prioritizing and implementing management efforts in natural areas, for educating lay audiences about environmental issues, and for supporting voluntary invasive plant removal programs. For more information on using the FLEPPC List of Invasive Plant Species, see Wildland Weeds Summer 2002 issue (Vol. 5, No. 3), pp. 16-17, or http://www.fleppc.org/list/list.htm

NOTE: Not all exotic plants brought into Florida become pest plants in natural areas. The FLEPPC List of Invasive Plant Species represents only about 11% of more than 1,400 exotic species that have been introduced into Florida and have subsequently established outside of cultivation. Most escaped exotics usually present only minor problems in highly disturbed areas (such as roadsides). And there are other exotics cultivated in Florida that are "well-behaved" — that is, they don't escape cultivation at all.

FLEPPC Database – The Florida Exotic Pest Plant Database contains over 211,000 sight records of infestations of FLEPPC Category I and Category II species in Florida public lands and waters. 143 species are recorded. Nearly all of the records are from local, state, and federal parks and preserves; a few records document infestations in regularly disturbed public lands such as highways or utility rights-of-way. Natural area managers and other veteran observers of Florida's natural landscapes submit these records, with many supported further by voucher specimens housed in local or regional herbaria for future reference and verification. New and updated observations can be submitted online at www.eddmaps. org/florida/. This database, along with other plant data resources such as the University of South Florida Atlas of Florida Vascular Plants at www.plantatlas.usf.edu, the Florida Natural Areas Inventory database at www.fnai.org, and The Institute for Regional Conservation Floristic Inventory of South Florida database at www.regionalconservation.org, provides important basic supporting information for the FLEPPC List of Invasive Plant Species.

Images of FLEPPC-listed species may be found at one or more of the following websites: University of South Florida Atlas of Florida Vascular Plants, www.plantatlas.usf.edu; the University of Florida Herbarium collection catalog, http://www.flmnh.ufl.edu/herbarium/cat/, and image gallery, http://www.flmnh.ufl.edu/herbarium/cat/imagesearch.asp; at Fairchild Tropical Botanic Garden's Virtual Herbarium, www.virtualherbarium.org/vhportal.html, The Robert K. Godfrey Herbarium at Florida State University, http://herbarium.bio.fsu.edu/index.php; the University of Florida's IFAS Center for Aquatic and Invasive Plants, http://plants.ifas.ufl.edu, and the USDA PLANTS database, http://plants.usda.gov/. Please note that greater success and accuracy in searching for plant information is likely if you search by scientific name rather than common name. Common names often vary in cultivation and across regions.
