

# Data-Driven Management: The Fort Bragg Non-native Invasive Plant Management Program

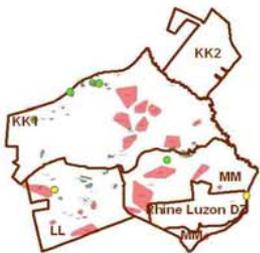

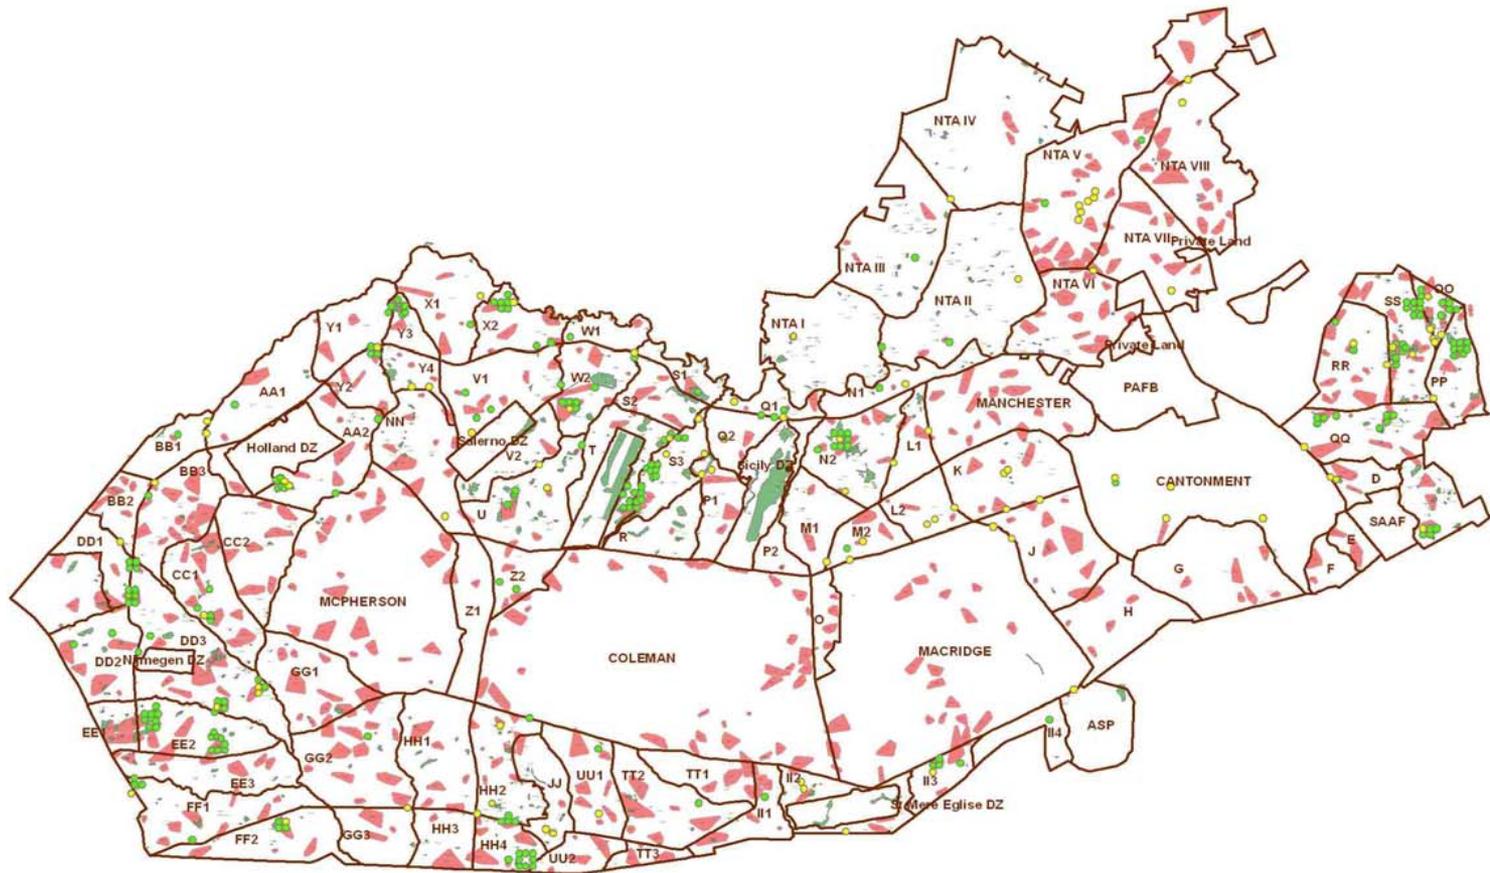

- Blue Ridge
- Piedmont
- Sandhills
- Upper Coastal Plain
- Lower Coastal Plain
- Coastal Islands

# FORT BRAGG

Home of the  
Paratroopers  
and  
Special Operations

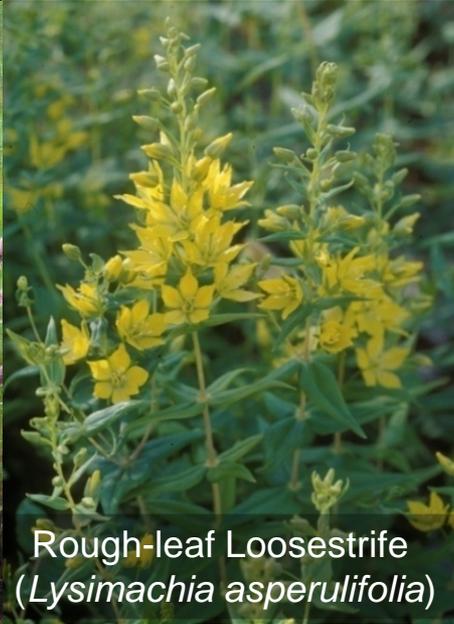

- XVIII Airborne Corps
- Army Special Operations Command
- 82<sup>nd</sup> Airborne Division
- 34,000 enlisted soldiers
- National Guard, U.S. Air Force, U.S. Marine Corps, and U.S. Army Reserve

American chaffseed  
(*Schwalbea americana*)

Rough-leaf Loosestrife  
(*Lysimachia asperulifolia*)

Michaux's sumac  
(*Rhus michauxii*)

ENDANGERED SPECIES

DEPT. OF THE ARMY

Red-cockaded Woodpecker  
(*Picoides borealis*)

Chinese privet  
infestation

*Rhus michauxii*  
Federally-listed rare  
plant

---

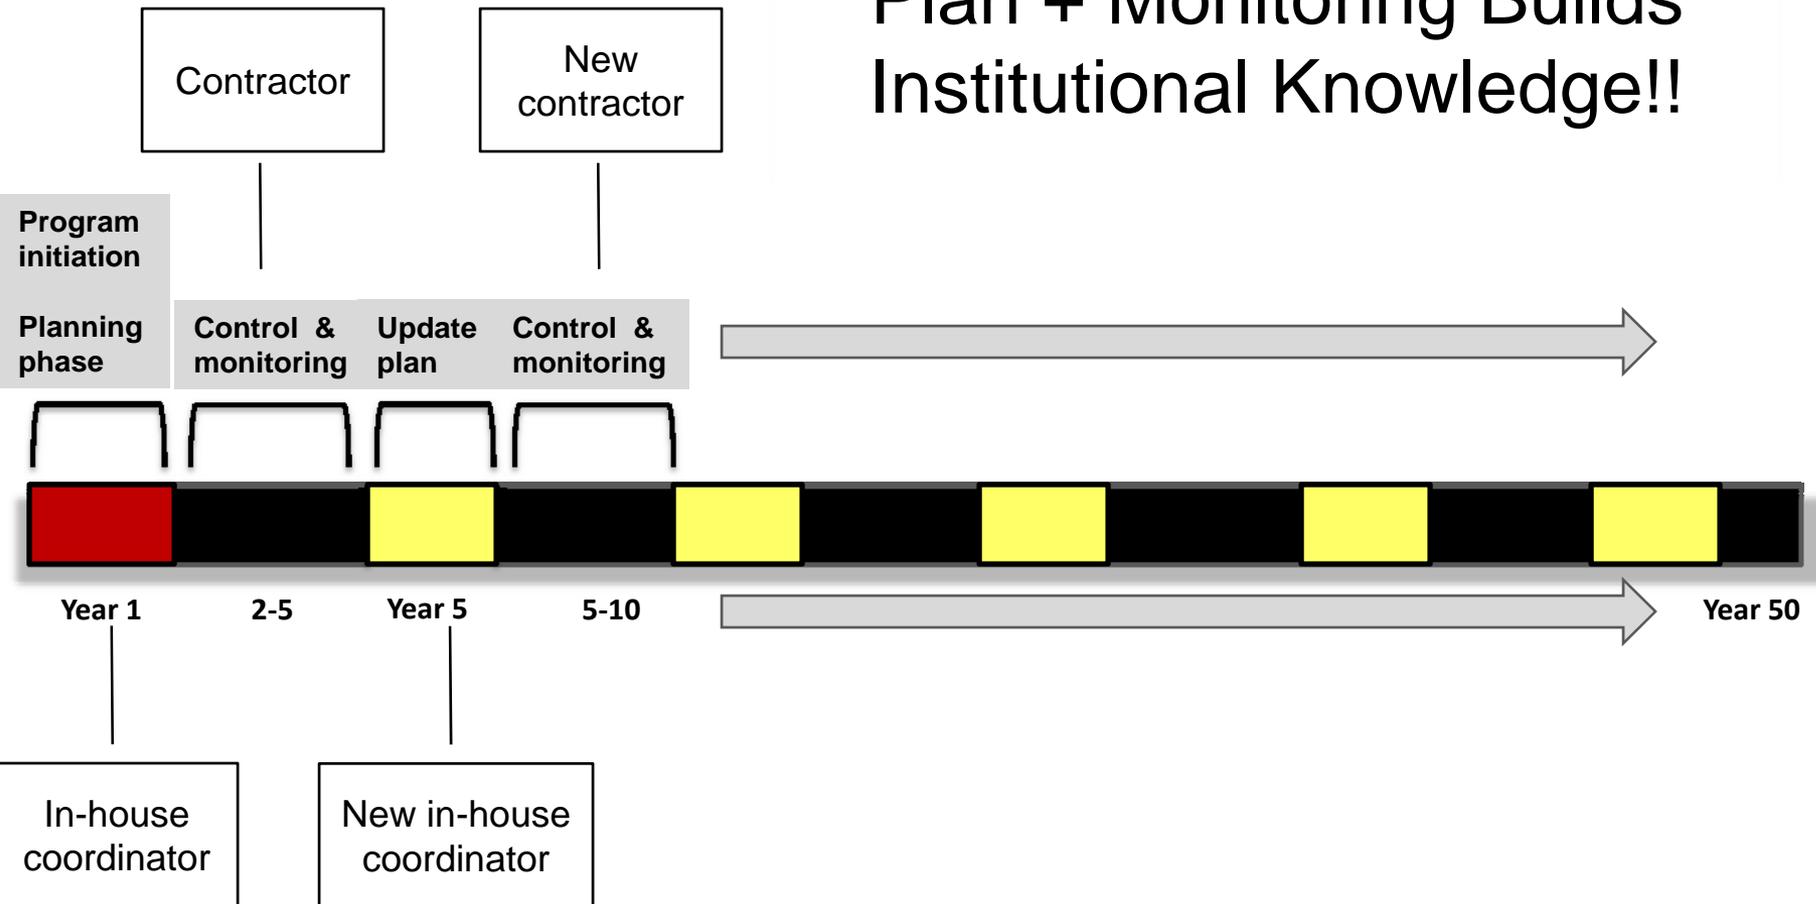

Fort Bragg Non-native Invasive Plant  
Species Management Program

# Approach

- Integrated planning
- Data-driven management
- Proactive rather than reactive
- Continuous monitoring
- Regional management

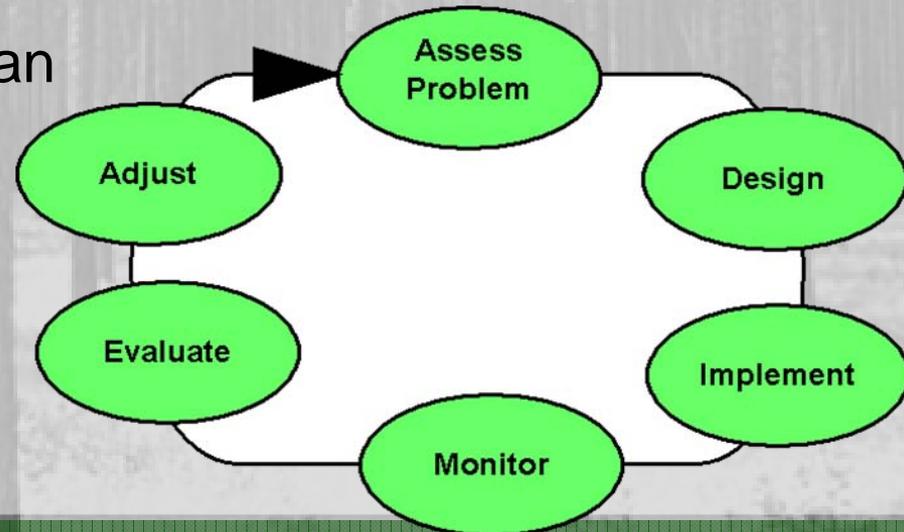

# Management timeline

Plan + Monitoring Builds Institutional Knowledge!!

# Program Outline

- Collect and Summarize Data
- Review existing land management goals
- Identify impacts
- Establish priorities
- Develop management plan
- Implement plan
- Monitor distributions
- Adaptive management

# Installation-wide Surveys

- 5,005 plots surveyed in 2003/2004
  - 25 x 50 meter plot
  - Percent cover estimated
- Plots randomly stratified to focus where plants were likely to occur and cause most harm

Endangered species sites

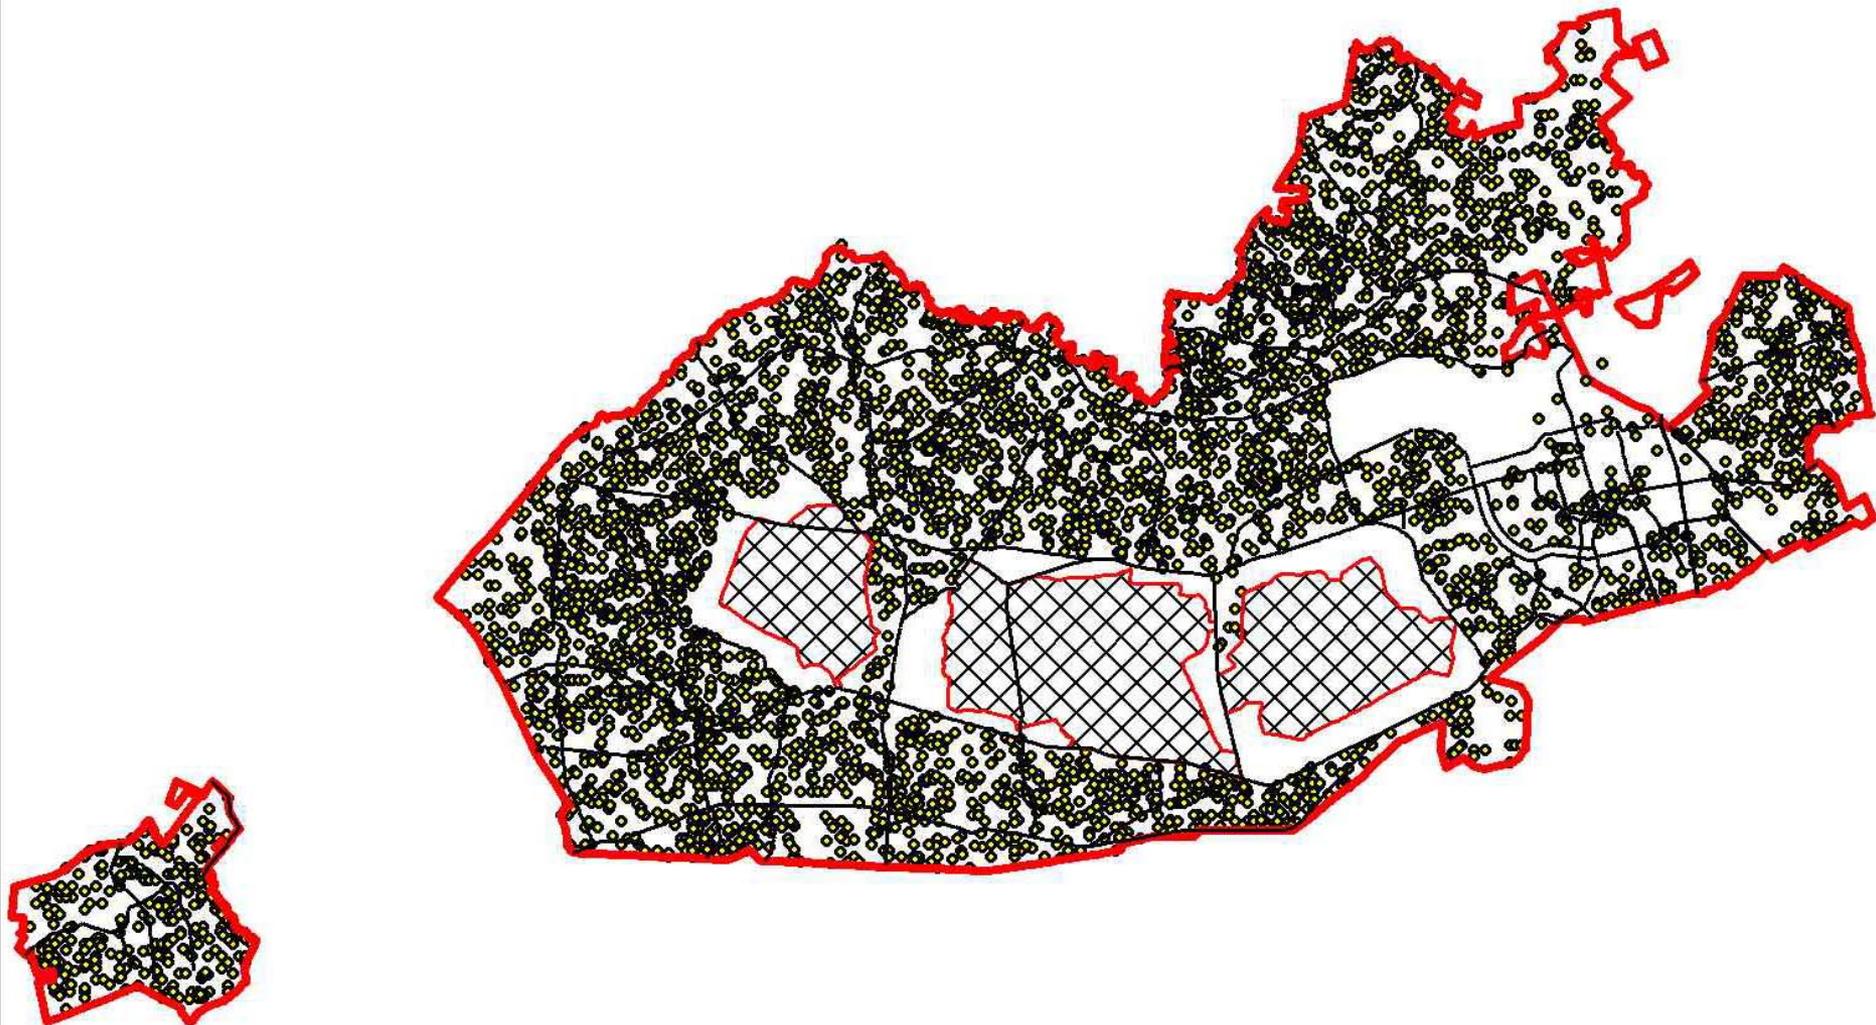

Wildlife food fields

Training areas

Plant communities

- Roadside survey

• Sample Points

— Fort Boundary

▣ Impact Areas

— Roads/Firebreaks

# Mapping

- All data stored in a geodatabase
- Maps were developed using kriging
- Point observations recorded
- Used as baseline to compare spread and control success

# Initial Results

## 38 species identified

aneilima 24

bristled knotweed 3

Chinaberry 101

Chinese privet 341

Chinese tallowtree 10

Chinese yam 51

crown vetch 1

giant reed 24

Japanese barberry 128

Japanese honeysuckle 113

kudzu 188

mimosa 177

multiflora rose 21

parrot feather 6

tree of heaven 30

white poplar 10

wisteria 10

white mulberry 3

winged burningbush 22

# Management Plan Development

## Summarize data collection

- Document methods
- Analyze results

## Review Land Management Goals

- INRMP
- Stand-alone management plans
- Stakeholder meetings

# Management Plan Development

## Document Management Prioritization

- Methods
- Results

## Identify control methods

- Biological
- Mechanical
- Chemical
- Restoration
- Cultural/Preventative
- Early Detection/Rapid Response Program

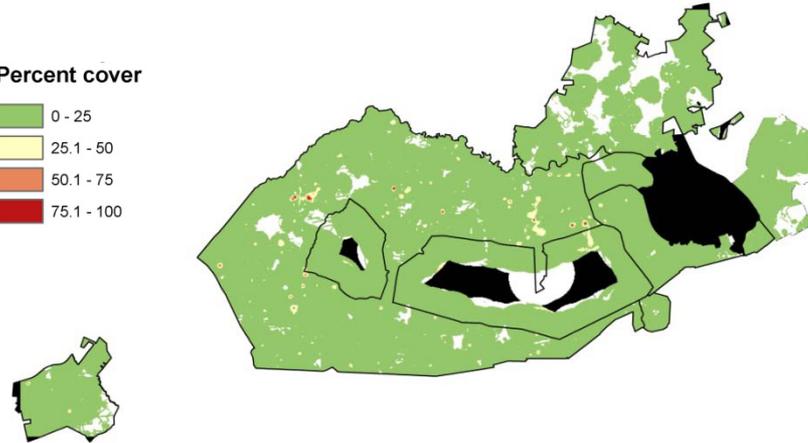

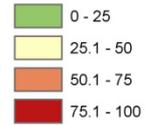

# Land Management Goals

- Maintain stable and expanding populations of rare plants
- Preserve Red-cockaded Woodpecker foraging habitat
- Ensure realistic training environments
- Provide wildlife and recreation programs

# Need to Prioritize Management

---

Percent cover

# Management Complexities

Multiple Invasive Plants

Multiple Threatened and Endangered Species

Multiple Land Uses

# Identify Impacts

**Short-term**

**Long-term**

**Direct**

**In-direct**

# Decision Support

---

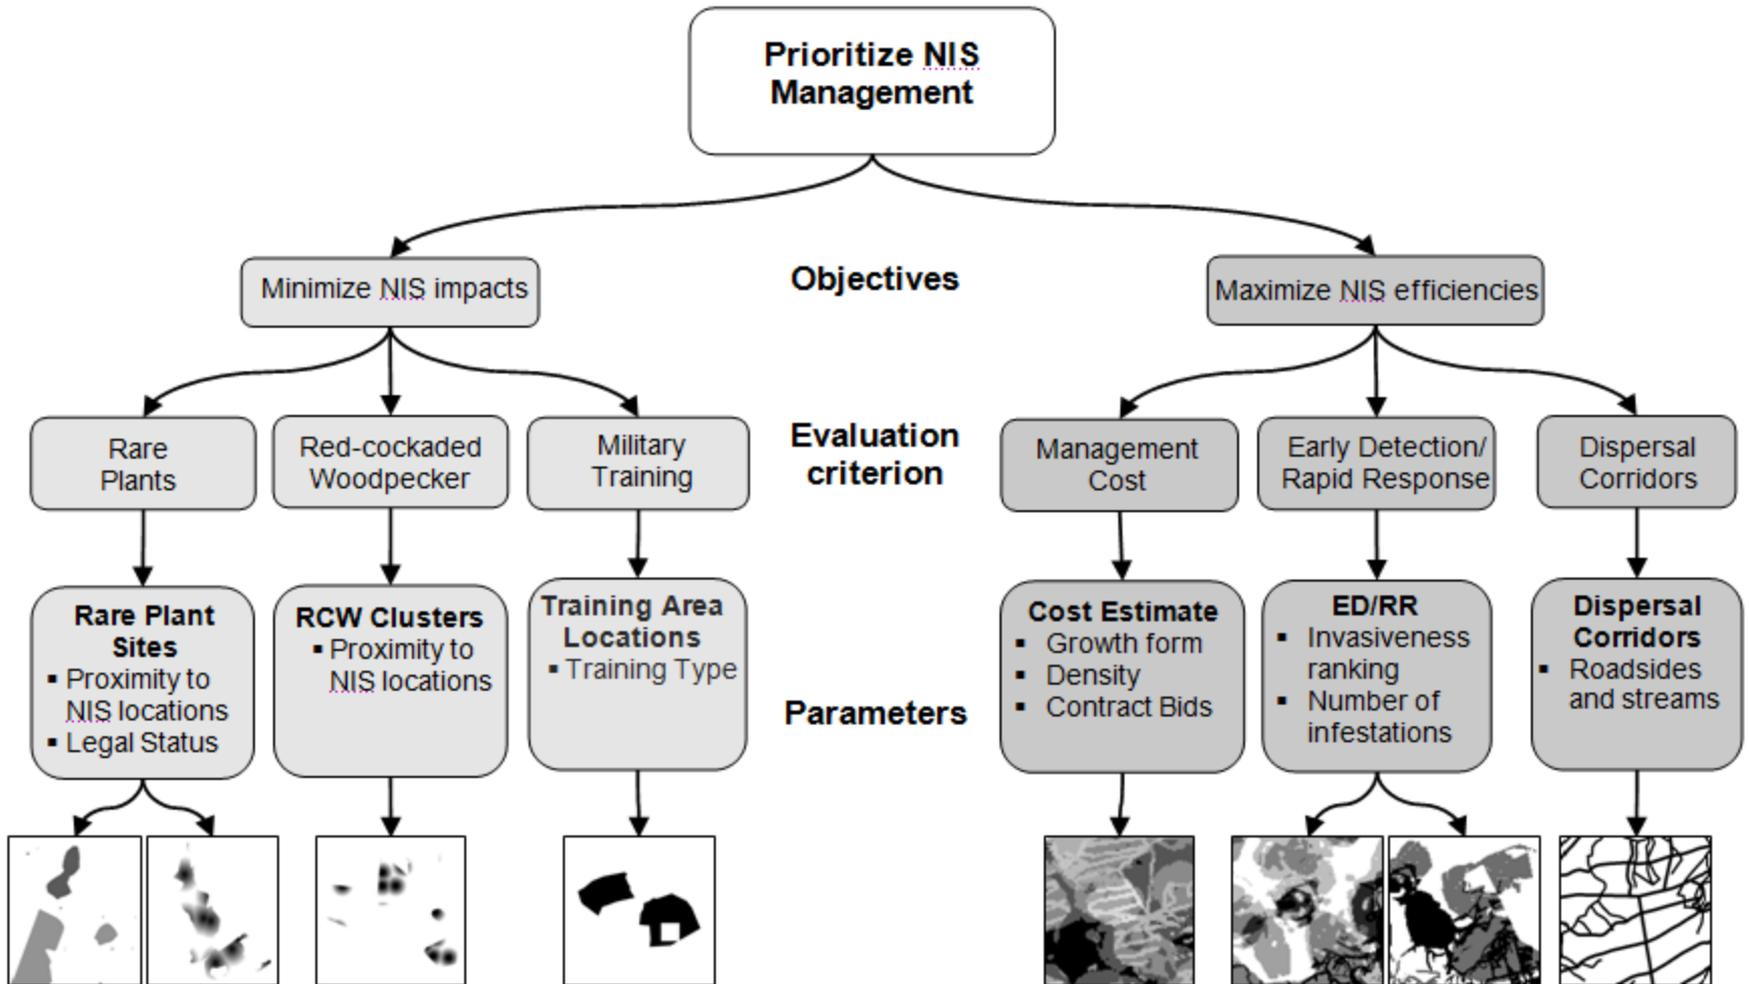

- Solve complex problems
  - Compiles data, personal knowledge
  - Past/Current Application of DS
    - Transportation planning
    - Hazardous waste
    - Real estate
    - Natural resource management
    - Environmental planning
-

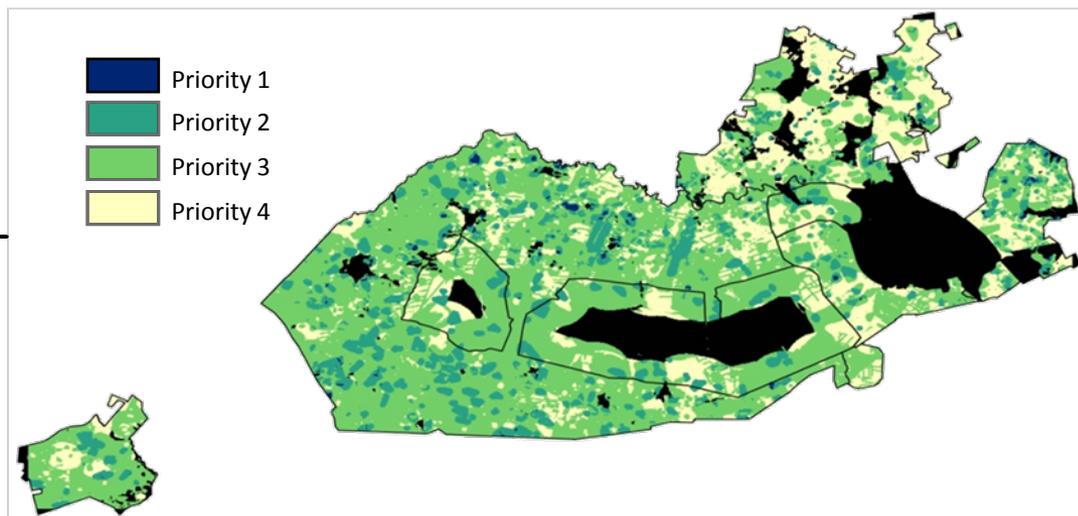

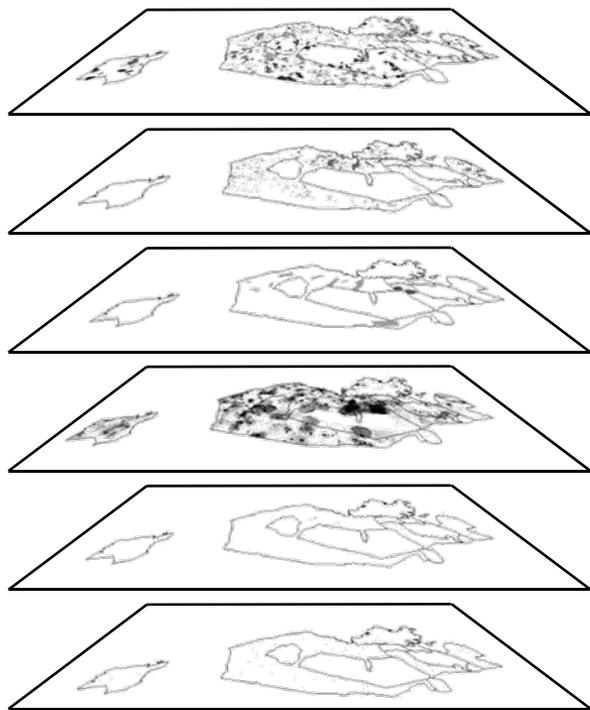

# Decision Support

---

---

- Objective, transparent, consensus-forming
  - Incorporate relevant data
  - Management strategies
  - Utilize stakeholder knowledge
-

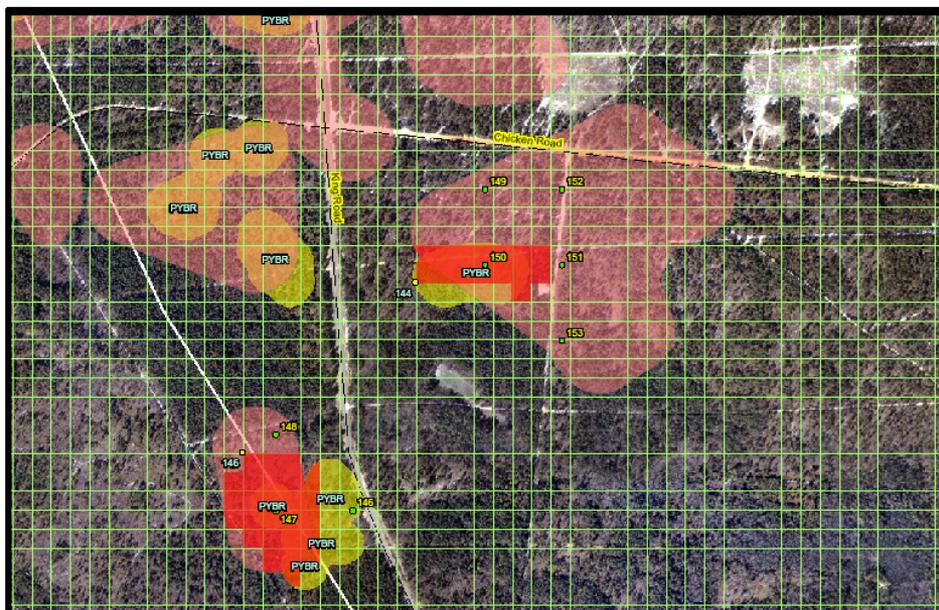

# Prioritize Management

- Prioritize where management should occur
- Use GIS data to create a priority map
- Document methods and results in management plan
- Update as more data is available and datasets are updated

# Implementation

- Species-specific approach
  - Early Detection/Rapid Response
- Site-specific approach
  - Highest priority sites

Scale 1:9,000

TES Treatment Areas

Monitoring Plots

Wayfinding point

RCW Clusters

Rare plant sites

50 meter grid

Roads

Impact Areas

ENDANGERED SPECIES

DEPT. OF THE ARMY

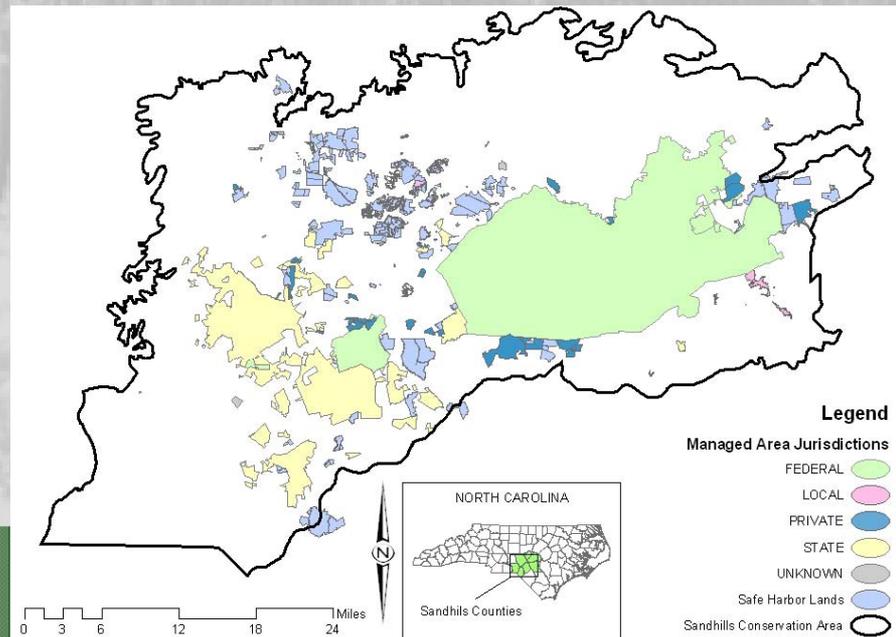

# Monitoring and Adaptive Management

- Updates species distribution database
- Control actions recorded
- Control success evaluated

# North Carolina Sandhills Weed Management Area

- DoD Legacy Program funded development of a Weed Management Area
- Partnership of federal, state, local agencies, NGOs, and private landowners cooperatively managing non-native invasive plant species in a defined area

# NCSWMA Participants

# Potential Invaders

Highly Invasive Species Not Identified in the Sandhills	
<i>Cayratia japonica</i>	bushkiller
<i>Centaurea dubia</i>	short-fringed knapweed
<i>Centaurea maculosa</i>	spotted knapweed
<i>Cytisus scoparius</i>	scotch broom
<i>Hydrilla verticillata</i>	hydrilla
<i>Imperata cylindrica</i>	cogon grass
<i>Lonicera morrowii</i>	Morrow's honeysuckle
<i>Lonicera standishii</i>	Standish's honeysuckle
<i>Lygodium japonicum</i>	Japanese climbing fern
<i>Lythrum salicaria</i>	purple loosestrife
<i>Myriophyllum spicatum</i>	European water-milfoil
<i>Phragmites australis</i>	common reed
<i>Polygonum perfoliatum</i>	mile-a-minute
<i>Ranunculus ficaria</i>	lesser celandine
<i>Rubus phoenicolasius</i>	wineberry
<i>Salvinia molesta</i>	giant salvinia

Japanese knotweed (*Polygonum cuspidatum*)

golden bamboo (*Phyllostachys aurea*)

- 16 – 40 feet tall
- spreads rapidly
- dense monoculture
- introduced as ornamental
